

Boom Arm with 3Kg Counterweight

Reference: SBX-MINIBOOMARM

- Adjustable length 108-206 cm
- Removable 3kg metal counterweight
- Includes metal grip head
- Spigot 16mm end with 1/4" screw
- Metal collars

Product description:

This boom arm allows a small fixture to be cantilevered over or behind the actors in places where it could not be mounted by other means.

The boom arm attaches to the central column of the light stand using the metal grip head with oversized locking handle.

This boom arm is designed for when a limited amount of extension is required.

The unit is lightweight, yet provides stability through the use of the 3 Kg removable counterbalance weight.

The 16mm spigot allows mounting a lighting fixture or accessory with a baby receiver. The maximum payload o the boom arm when extended is 3 kg and 5 kg when retracted.

The length of the arm can be adjusted from 108 to 206 cm.

The telescopic columns are made from aluminum with poles of 20 & 25 mm.

Technical Specifications:

Stands

Stand type:	Boom arm
Mounting	Receiver 16mm (5/8") & Stud 28mm (1-1/8")
