

Stand with Boom Arm, Eccentric Cam and Counterweight

Reference: SBX-BOOMARMECCS

- Telescopic boom arm: 120 to 220 cm
- Stand maximum height: 175 cm
- Material: aluminum with black finish
- Includes eccentric cam connector

Product description:

A boom arm is ideal for lighting a model from above, or to create more freedom of action for the photo- or videographer. With a boom arm you can hang your studio lighting above your subject, without it being visible in the picture/video. You also create more freedom because for example you can walk under the lighting.

This boom set comes with a stand, telescopic arm and counterweight. The arm can be used universally. The reliable eccentric cam connector (clamps around any tube, with a maximum diameter of 3 cm) provides a multifunctional application because the arm can be moved in any position you want.

Product features:

Weight: 7.1 kg
Stand type:: Baby stand
Mounting: Stud 16mm (5/8") with 1/4" top screw
Maximum height: 175 cm
Minimum height: 100 cm
