

Butterfly 240 x 240 cm - Diffusion with Honeycomb

Reference: MRX-BF24X24HC

- Large reflector panel with included honeycomb
- Lightweight, stable & collapsible design
- White diffusion fabric to soften harsh sunlight
- Honeycomb to increase light control
- Pipe-in-pipe assembling system
- Solid aluminum frame construction

Product description:

This Butterfly Reflector is a large sized diffusion panel that can be used to soften and diffuse the light.

The collapsible aluminum frame has a pipe-in-pipe assembling design which allows a quick setup and operation.

The diffusion panel is held in place using easy to hook on elastic straps.

The flag features a translucent white surface to diffuse the light and soften the shadows.

The material is UV treated to withstand long exposure to sun.

Use the Butterfly Panel horizontally overhead your subject to soften harsh light sources like the sunlight or use it vertically in front of powerful light sources like the HMI lights to mimic the effect of a large softbox light.

The included honeycomb helps to direct the light through the diffusion panel and to somewhat reduce the light spill, acting like a large softbox.

For mounting the Butterfly 200 x 150 cm on 2 light stands the Pro-Clamp with Eccentric Cams can be used, allowing to adjust the tilting angle of the panel. (see "Add mounting accessories" option on the right). These clamps are compatible with various stands central column diameters.

- Size: 240 x 240 cm
- Weight: 5 Kg
- Packed size: 105 x 20 x 15
