

Softbox Kit for Junior Fresnel 2000W - 120x120 cm

Reference: LTA-SOFTBOXKITJ2000

- 6 poles mounting system
- Front soft louver & smaller inner diffusion
- Includes softbox connector for up to 8 poles
- Heat resistant tent fabric
- Silver interior for increased light intensity
- Softbox connector mounting diameter: 24.2 cm
- Softbox size (W x H): 120 x 120 cm

Product description:

The softbox kit with speed ring for Cinelight Junior Fresnel 2000W and other similar models (ARRI Junior 2000) is a very useful light modifying accessory to dramatically soften the light output.

The square shape of the softbox delivers a great result when the fixture is used as key or fill light. Has a deep design that's ideal for use with a range of narrow beam lights like our Junior Fresnel 2000W light.

The increased depth of the softbox allows the light to fill the front diffusion screen evenly and increase the output of the Fresnel 1000W.

The silver interior provides a specular effect of the output, enhancing the light intensity of the Fresnel 1000W fixture.

In addition to the front diffusion screen, the softbox includes a removable interior small diffusion silk for the outermost soft, flattering result.

The front detachable soft grid narrows the spread of light and reduces the side spill for a more directional yet diffused output.

The tent is made from heat resistant fabric that can withstand the temperature generated by a 1000 watts tungsten lamp.

Key Features:

- 6 poles mounting system
- Includes soft honeycomb and second smaller white diffusion silk
- Includes softbox connector with 8 holes for rectangular and octagonal softboxes
- Softbox size (W x H): 120 x 120 cm
- Softbox connector mounting diameter: 24.2 cm
