

External 2-Bank Ballast for CineFlo

Reference: LFA-BALCINEFLO2B

- CineFlo 2Bank Select Electronic Ballast
- High frequency, ensures flicker-free operation
- Individual lamp control for 2Bank fixtures
- Compatible with Kino Flo brand

Product description:

The professional 2Bank ballast is manufactured from high quality components, matching the increased performance and durability of higher cost competitors. The ballast is designed to operate the lamps at 24'000 Hz, 400 times faster than traditional ballasts, ensuring a flicker-free operation at any shutter speed. Includes an easy to change power fuse to protect the ballast against electrical shocks.

The ballast has 2 separate switches to control each lamp individually and adjust the light output accordingly. The individual lamp control switching provides a dimming effect without color shifting.

Our CineFlo 2Bank select ballast features an additional high-output/standard-output toggle switch. By using the high-output setting for 4FT (75W) lamps and the standard setting for 2FT (40W) lamps, the same ballast can work for both CineFlo 4FT and 2FT fixtures.
