- Adjustable 5 compartments using Velcro dividers
- Silicone wheels & rigid pulling handle
- Interior dimensions: 94 x 34 x 25 cm
- Exterior dimensions: 103 x 39 x 30 cm

## Product description:

Water-resistant Cordura padded rigid bag is perfect for carrying portable lighting equipment and keeping it organized for the job. Cordura is a texturized yarn, discontinuous in structure like a natural fiber, with the feel of cotton canvas. This material is abrasion and water resistant, less vulnerable to fraying at the edges.

The bag is designed to fit multiple lighting fixtures (up to four lamp heads), as well as stands (maximum three 93 cm long stands).

Dual directional zippers open quickly to fully expose the interior. Inside, detachable Velcro dividers separate the main chamber into sections ideal to isolate lights from stands. The three short dividers and the long one are a great feature for custom placement options. You can remove the dividers to create a single, generous storage compartment. There is a convenient side accessory pocket for extra storage. The bag's lid is equipped with zippered net pockets where you can store your accessories (cables, scrims, diffusion filters, softbox components).

This bag is equipped with heavy-duty silicone wheels and rigid pulling handles as well as two side carrying straps.

The exterior plastic pocket on the lid is ideal to fit small ID cards, in order to personalize your lighting kit.

Compatible with the following tungsten lights:

- Redhead 800W
- Junior Fresnel 150W / 300W / 650W
