- Must-have accessory for any grip crew
- Dual zipper ensure secure closure
- Reinforced corners for wear resistance
- 20 kg weight when filled with sand
- Made from Cordura material
- Pocket size: 39 x 23 cm

Product description:

This black saddle-style sand bag is intended to secure the base of light stands in order to help create a safe working environment. A must have accessory for any filming crew for using to stabilize the stands in any conditions or acting as counterweight for boom arms.

This is a dual wing sandbag with dual zippers, made from thick Cordura material.

The dual zipper ensures a secure closing of the pockets preventing possible sand leaking.

For a better resistance to usual wear, the sand bag is designed with reinforced corners.

The bag features neon yellow strips on both sides, designed to warn people not to stumble. In order to hide the colored part of the bag, not to be seen on the set, the sand bag can be turned backwards, where a simple, black surface is shown.

Key Features:

- this sand bag will weight approximately 10 kg when filled with sand
- weight can be changed by adding or subtracting sand
- made from thick Cordura material
- pockets with dual zipper to reduce risk of sand leaking when maneuvered
- reinforced corners for a better resistance to wear
- pocket size: 39 x 23 cm
- top carrying strap
- great for stabilizing light stands
- use as a boom counterweight
- empty weight: 170g
