

# Butterfly 360 x 360 cm - Diffusion

Reference: MRX-BF36X36

- Large butterfly panel with diffuser fabric
- Robust, stable & collapsible design
- 1/3 white diffusion fabric to soften harsh sunlight
- Quick assembling by pin lock system
- Solid aluminum frame construction
- As: H2012, LH.2012.A

## Product description:

This butterfly frame is a large sized diffusion panel that can be used to soften and diffuse direct light.

The frame assembly is made from heavy duty 25 mm square section aluminum tubes, which can be easily pin locked together for quick setup.

The diffusion panel is held in place using easy to hook-on elastic straps.

The flag includes a 1/3 translucent white fabric to diffuse the light and soften the shadows.

The material is UV treated to withstand long exposure to sun.

Use the butterfly horizontally overhead your subject to soften harsh light sources like the sunlight or use it vertically in front of powerful light sources like the HMI lights to replicate the effect of a large softbox light.

For convenient mounting on light stands, the butterfly includes two friction brackets to be used along with two [Grip Heads LD](#) (Large Diameters). This allows for easy angle adjustment of the panel (see "Add mounting accessories" option on the right).

- Size: 360 x 360 cm
- Weight: 16.8 Kg
- Packed size: 160 x 29 x 17 cm
- Similar to: H2012, LH.2012.A

#### Package Content:

- 1 x Aluminum frame
- 1 x Diffusion fabric
- n x Elastic fasteners
- 1 x Transport bag
